¹ Uitleg bij de gebruikte cijfers vindt de lezer op pp. 87-88. Voor de overige kolommen komt alles tussen 1796 en 1815 uit RAG, MAA, 69.

² Dit zijn de door Van Hoken berekende aantallen. VAN HOLEN (Gorik), Op cit., pp. 37-39 en 289-291. In de kolommen met berekingen gebruikte ik wel steeds het officiële cijfer.

³ De opmerking uit voetnoot 1 blijft gelden, dit maal echter tot en met 1818. Voor 1830-1860 gebruikte ik de gegevens uit MATTHYS (Christa), Oefeningen nieuwste tijden II. De crisis van 1846 in Assenede., Gent, RUG, 2001, (onuitgegeven kandidatuuroefening), s.p. Voor 1865-72, 1875-78 en 1894 hanteerde ik RAG, MAA, 57 en voor 1900 tenslotte CLAEYS (Jackie), De bevolking van Groot-Assenede in 1900., in: De Twee Ambachten. Themanummer: anno 1900, Assenede, De Twee Ambachten, IIX, 2000, 2, pp. 21-47.

Enkel de eerste jaarhelft voldoet aan de visie waarbij de agrarische jaarcyclus zich weerspiegelt in de verdeling van de geboorten doorheen het jaar. er zijn immers veel geboorten in het voorjaar en vanaf juni is er een terugval. In augustus stijgen de cijfers echter weer om in het najaar vrij laag te blijven. Ik ka hiervoor geen verklaring geven.

Weer hanteer ik hier een vijfjaarlijkse verdeling. Wanneer de burgerlijke staat van een persoon tijdens een leeftijdsfase wijzigt wordt hij opgenomen onder de categorie waarin hij/zij zich bij het einde van die fase bevindt. Bijvoorbeeld: een vrijgezel die op zijn 37^{ste} in het huwelijksbootje stapt, wordt in de groep 35-39 als 'gehuwd' genoteerd. Deze werkwijze heeft één belangrijk nadeel: wanneer zich bij een persoon tijdens één fase meerdere veranderingen voltrekken, blijven de tussentijdse posities buiten het gezichtsveld. In deze tabel is bovendien geen rekening gehouden met tijdelijk afwezig zijn wanneer de burgerlijke staat gedurende de afwezigheid is gekend, zodat enige verschillen kunnen optreden met de tabellen (4.2. en 4.3.) in persoonjaren.
